gonadotropin subunits of silver carp (Hypophthalmichthys molitrix).";
Gen. Comp. Endocrinol. 78:23-33(1990).
-!- FUNCTION: INVOLVED IN GAMETOGENESIS AND STEROIDGENSIS.
-!- SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA CHAIN.
-!- SIMILARITY: BELONGS TO THE GLYCOPROTEIN HORMONES BETA CHAIN
                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                     Hypogonadism caused by a single amino acid substitution in the beta
                                                                                                                                                                                                                                                                                                                                                                                                                               Subunit of lutefinizing hormone.";

New Engl. J. Med. 326:179-183(1992).

-!- FUNCTION: PROMOTES SPERMATOGENESIS AND OVULATION BY STIMULATING
THE TESTES AND OVARLES TO SYNTHESIZE STEROIDS.

-!- SUBUNIT: HETERODIMER OF A COMMON ALPHA CHAIN AND A UNIQUE BETA
CHAIN WHICH CONFERS BIOLOGGICAL SPECIFICITY TO THYROTROPIN,
LUTROPIN, FOLLITROPIN AND GONADOTROPIN.

-!- SISSUE SPECIFICITY: PITUITARY:

-!- DISEASE: DEFECTS IN LHB ARE A CAUSE OF HYPOGONADISM WHICH IS
CHARACTERIZED BY INFERTILITY AND PSEUDOHERMARHRODITISM.

-!- SIMILARITY: BELONGS TO THE GLYCOPROTEIN HORMONES BETA CHAIN
                                                                                                                                                                                                                                                                                    Keutmann H.T., Hua Q.-X., Weiss M.A.; "Structure of a receptor-binding fragment from human luteinizing hormone beta-subunit determined by [1H]- and [15N]nuclear magnetic

"Porcine follitropin. The amino-acid sequence of the beta subunit.";
Eur. J. Blochem. 86:115-120(1978).

-!- FUNCTION: STIMULATES DEVELOPMENT OF FOLLICLE AND SPERMATOGENESIS
IN THE REPRODUCTIVE ORGANG ALPHA CHAIN AND A UNIQUE BETA
CHAIN WHICH CONFERS BIOLOGICAL SPECIFICITY TO THYROTROPIN,
LUTROPIN, FOLLITROPIN AND GONADOTROPIN.

-!- SIMILARITY: BELONGS TO THE GLYCOPROTEIN HORMONES BETA CHAIN
FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ovis aries (Sheep).

"Strain difference in nucleotide sequences of rat glycoprotein hormone subunit cDNAs and gene fragment.";
Zool. Sci. 7:877-885(1990).
-!- FUNCTION: STIMULATES DEVELOPMENT OF FOLLICLE AND SPERMATOGENESIS IN THE REPRODUCTIVE ORGANS.
-!- SUBUNIT: HETERODIMER OF A COMMON ALPHA CHAIN AND A UNIQUE BETA CHAIN WHICH CONFERS BIOLOGICAL SPECIFICITY TO THYROTROPIN, CUTROPIN, FOLLITROPIN AND GONADOTROPIN.
-!- SIMILARITY: BELONGS TO THE GLYCOPROTEIN HORMONES BETA CHAIN
                                                                                                                                                                                                                                                                                                                                                                                                                        MEDIINE; 89356263.

-!- FUNCTION: PROMOTES SPERMATOGENESIS AND OVULATION BY STIMULATING
THE TESTES AND OVARIES TO SYNTHESIZE STEROIDS.
-!- SUBUNIT: HETERODIMER OF A COMMON ALPHA CHAIN AND A UNIQUE BETA
CHAIN WHICH CONFERS BIOLOGICAL SPECIFICITY TO THYROTROPIN,
LUTROPIN, FOLLITROPIN AND GONADOTROPIN.
-!- SIMILARITY: BELONGS TO THE GLYCOPROTEIN HORMONES BETA CHAIN

"Amino acid sequence of reduced and carboxymethylated alpha- and beta-
subunits of the little picked whale luteinizing hormone.";

Biokhimita 50:1972-1986(1985).

-!- FUNCTION: PROMOTES SPERMATOGENESIS AND OVULATION BY STIMULATING

THE TESTES AND OVARIES TO SYNTHESIZE STEROIDS.

-!- SUBUNIT: HETEROIMER OF A COMMON ALPHA CHAIN AND A UNIQUE BETA

CHAIN WHICH CONFERS BIOLOGICAL SPECIFICITY TO THYROTROPIN,

LUTROPIN, FOLLITROPIN AND GONADOTROPIN.

-!- SIMILARITY: BELONGS TO THE GLYCOPROTEIN HORMONES BETA CHAIN

Pankov Y.A., Karasev V.S.;

Luteinizing hormone of the sperm whale. Amino acid sequences of reduced and carboxymethylated beta-subunits.";

Biokhimina 49:1004-1018(1984).

-i- FUNCTION: PROMOTES SPERMATOGENESIS AND OVULATION BY STIMULATING THE TESTES AND OVARIES TO SYNTHESIZE STEROIDS.
THE TESTES AND OVARIES TO SYNTHESIZE STEROIDS.
SUBUNIT: HETERODIMER OF A COMMON ALPHA CHAIN AND A UNIQUE BETA
CHAIN WHICH CONFERS BIOLOGICAL SPECIFICITY TO THYROTROPIN,
LUTROPIN, FOLLITROPIN AND GONADOTROPIN.
SIMILARITY: BELONGS TO THE GLYCOPROTEIN HORMONES BETA CHAIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

GONADOTROPIN BETA-II CHAIN PRECURSOR (GTH-II).
Anguilla anguilla (European freshwater eel).
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Actinopterygii;
Neopterygii; Teleostei; Anguilliformes; Anguillidae; Anguilla.
                                                                                                                                                                                                                                                                                                                                         beta subunit of the type-II gonadotrophin from the European eel.", J. Mol. Endocrinol. 4:257-264(1990).

-i- FUNCTION: INVOLVED IN GAMETOGENESIS AND STEROIDOGENSIS.

-i- SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA CHAIN.

-i- SIMILARITY: BELONGS TO THE GLYCOPROTEIN HORMONES BETA CHAIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                      EUT. J. BIOCHEM. 39:235-253(1973).

-!- FUNCTION: PROMOTES SPERMATOGENESIS AND OVULATION BY STIMULATING

-!- FUNCTION: PROMOTES TO SYNTHESIZE STEROIDS.

-!- SUBUNIT: HETERODIMER OF A COMMON ALPHA CHAIN AND A UNIQUE BETA

CHAIN WHICH CONFERS BIOLOGICAL SPECIFICITY TO THYROTROPIN,

LUTROPIN, FOLLITROPIN AND GONADOTROPIN.

-!- SIMILARITY: BELONGS TO THE GLYCOPROTEIN HORMONES BETA CHAIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       P01231;

Lin Y.-W.P., Rupnow B.A., Price D.A., Greenberg R.M., Wallace R.A.;
"Fundulus heteroclitus gonadotropins. 3. Cloning and sequencing of gonadotropic hormone (GTH) I and II beta-subunits using the polymerase chain reaction.";

Mol. Cell. Endocrinol. 85:127-139(1992).

-!- FUNCTION: INVOLVED IN GAMETOGENESIS AND STEROIDOGENSIS.

-!- SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA CHAIN.

-!- SIMILARITY: BELONGS TO THE GLYCOPROTEIN HORMONES BETA CHAIN.

FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
